

Halifax engineers go to extraordinary lengths to service our fans...

If you want reliability, faultless performance and best efficiency, regular servicing is a must

**Balance**

Wear and tear can throw a fan out of balance and this in turn leads to long-term bearing degradation and eventual failure. On-site rebalancing is a Halifax Fan speciality.

**Bearing**

Bearings don't just need regular lubrication; they need regular inspection to check for wear and tear, pitting, flat spots and corrosion. Bearings can be checked without physically removing the fan from site.

**Vibration**

Vibration can be so subtle that with ambient noise it goes un-noticed until it's too late and catastrophic bearing failure occurs, and with it, extensive fan damage, leading to lengthy process downtime. Vibration testing can easily be performed on site.

## The Company

Halifax Fan Ltd is a global force in fan engineering with over 40 years of experience in building and servicing powerful fans for every imaginable fan application. This experience makes Halifax the ideal company to service your fans of any manufacture.

Halifax Fan offers a full site service including vibration analysis, dynamic balancing, bearing replacement, performance testing and re-commissioning. Where more serious damage is identified Halifax Fan offers a complete fan refurbishment service, bringing your fans back to full operating specification and dependability.

A stitch in time truly does save nine. Contact Halifax Fan today and enquire about fan service contracts.

## Services include:

- Fan application advice
- Energy saving consultancy
- Installation
- Alignment
- Vibration analysis
- Balancing – on and off-site
- Troubleshooting
- Training
- Performance testing
- Maintenance and refurbishment of fan equipment of any manufacture

A Halifax Fan no-commitment site survey could avoid lost production and **save you money** in the long run.
